

PVM18

Portable, Affordable, Schaefer VersaMist® Misting Fan.

Patented VersaMist® can reduce air temperature by as much as **30°F**

VersaMist®

The Patented VersaMist® can cool up to 200 square feet for approximately five hours.

It's simple to use. Fill it up, plug it in, turn it on!

Heat can be a major problem on many job sites, causing fatigue, lowering morale and decreasing productivity. Working in hot conditions may pose special hazards to safety and health including heat exhaustion and even heat stroke. Fans with misters are one of the best ways to minimize heat stress.

It has a 10 gallon water reservoir tank and includes a 25 foot outdoor-rated power cord with integrated GFCI. The VersaMist® mist pump is rated for one gallon per

minute output housed in a heavy-duty enclosure with a power cut-off tip switch.

Fan assembly includes a white powder-coated fan mounted to a yoke that is attached to the pump enclosure. The patented hub increases the air flow from the fan and releases mist in the "Sweet Spot" of the fans air stream. The mist hub has four .012 nozzles. One extra nozzle and two plugs are also included.

Total required amps for fan and mist pump: 2.15.

Cooler & Fan dimensions: 42" tall x 24" wide.

Optional cart with telescoping post for adjustable fan height.
